## Namespace: "https://DILCIS.eu/XML/ERMS"

### Schema(s)

#### Main schema ERMS.xsd

Namespace	https://DILCIS.eu/XML/ERMS
Properties	attribute form default: unqualified element form default: qualified

### Element(s)

#### Element erms

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	The main element for Transfer of information from an ERMS
Diagram	<p>The diagram illustrates the structure of the 'erms' element. It is a complex type ('ermsType') containing four child elements: 'control', 'aggregations', 'records', and 'additionalInformation'. The 'control' element contains 'controlType' and 'controllType'. The 'aggregations' element contains 'aggregationsType'. The 'records' element contains 'recordsType'. The 'additionalInformation' element is described as additional system documentation.</p>
Type	ermsType
Properties	content: complex
Model	control , (aggregations   records) , additionalInformation{0,1}
Children	additionalInformation, aggregations, control, records
Instance	<pre>&lt;erms xmlns="https://DILCIS.eu/XML/ERMS"&gt;   &lt;control&gt;{1,1}&lt;/control&gt;   &lt;aggregations&gt;{1,1}&lt;/aggregations&gt;   &lt;records&gt;{1,1}&lt;/records&gt;   &lt;additionalInformation&gt;{0,1}&lt;/additionalInformation&gt;</pre>

	</erms>
Source	<pre>&lt;xs:element name="erms" type="ermsType"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;The main element for Transfer of information from an ERMS&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

## Element ermsType / control

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	Information regarding the XML-document itself and the system from which the information is originating on top level
Diagram	<pre> classDiagram     class controlType {         identification *{ 1..oo}         informationClass {0..1}         classificationSchema {0..1}         securityClass {0..1}         dates {0..1}         maintenanceInformation {0..1}         systemInformation {0..1}     }     controlType "1..oo" --&gt; "1..oo" controlType : identification     controlType "0..1" --&gt; "0..1" controlType : informationClass     controlType "0..1" --&gt; "0..1" controlType : classificationSchema     controlType "0..1" --&gt; "0..1" controlType : securityClass     controlType "0..1" --&gt; "0..1" controlType : dates     controlType "0..1" --&gt; "0..1" controlType : maintenanceInformation     controlType "0..1" --&gt; "0..1" controlType : systemInformation   </pre>
Type	controlType
Properties	content: complex
Model	identification+ , informationClass{0,1} , classificationSchema{0,1} , securityClass{0,1} , dates{0,1} , maintenanceInformation , systemInformation{0,1}
Children	classificationSchema, dates, identification, informationClass, maintenanceInformation, securityClass, systemInformation
Instance	<pre>&lt;control xmlns="https://DILCIS.eu/XML/ERMS"&gt;   &lt;identification identificationType=""&gt;{1,unbounded}&lt;/identification&gt;   &lt;informationClass&gt;{0,1}&lt;/informationClass&gt;   &lt;classificationSchema&gt;{0,1}&lt;/classificationSchema&gt;   &lt;securityClass&gt;{0,1}&lt;/securityClass&gt;   &lt;dates&gt;{0,1}&lt;/dates&gt;   &lt;maintenanceInformation&gt;{1,1}&lt;/maintenanceInformation&gt;   &lt;systemInformation&gt;{0,1}&lt;/systemInformation&gt; &lt;/control&gt;</pre>

<pre>&lt;/xs:element&gt;</pre>
--------------------------------

## Element identification

Namespace	https://DILCIS.eu/XML/ERMS												
Annotations	Element for adding identifications like for example identification in Swedish archival description following the process based description or the sender's reference code for aggregation or record												
Diagram													
Type	extension of xs:string												
Properties	content: complex												
Used by	Complex Types aggregationType, controlType, recordType												
Attributes	<table border="1"> <thead> <tr> <th>QName</th> <th>Type</th> <th>Use</th> <th></th> </tr> </thead> <tbody> <tr> <td>identificationType</td> <td>xs:string</td> <td>required</td> <td></td> </tr> <tr> <td></td> <td></td> <td>IdentificationType (string/O): A description of the identifier type (e.g., OCLC record number, LCCN, ArchivalCode, SystemIdentifierRetentionCode etc.).</td> <td></td> </tr> </tbody> </table>	QName	Type	Use		identificationType	xs:string	required				IdentificationType (string/O): A description of the identifier type (e.g., OCLC record number, LCCN, ArchivalCode, SystemIdentifierRetentionCode etc.).	
QName	Type	Use											
identificationType	xs:string	required											
		IdentificationType (string/O): A description of the identifier type (e.g., OCLC record number, LCCN, ArchivalCode, SystemIdentifierRetentionCode etc.).											
Source	<pre>&lt;xs:element name="identification"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Element for adding identifications like for example identification in Swedish archival description following the process based description or the sender's reference code for aggregation or record&lt;/xs:documentation&gt;     &lt;xs:annotation&gt;       &lt;xs:complexType&gt;         &lt;xs:simpleContent&gt;           &lt;xs:extension base="xs:string"&gt;             &lt;xs:attribute name="identificationType" type="xs:string" use="required"&gt;               &lt;xs:annotation&gt;                 &lt;xs:documentation xml:lang="en"&gt;IdentificationType (string/O): A description of the identifier type (e.g., OCLC record number, LCCN, ArchivalCode, SystemIdentifierRetentionCode etc.).&lt;/xs:documentation&gt;               &lt;/xs:annotation&gt;             &lt;/xs:attribute&gt;           &lt;/xs:extension&gt;         &lt;/xs:simpleContent&gt;       &lt;/xs:complexType&gt;     &lt;/xs:annotation&gt;   &lt;/xs:element&gt;</pre>												

## Element informationClass

Namespace	https://DILCIS.eu/XML/ERMS		
Annotations	Describe the information class following the rules of classification of information		
Diagram			
Type	xs:string		
Properties	content: simple		
Used by	Complex Types aggregationType, controlType, recordType, restrictionsType		
Source	<pre>&lt;xs:element name="informationClass" type="xs:string"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Describe the information class following the rules of classification of information&lt;/xs:documentation&gt;</pre>		

```
</xs:annotation>
</xs:elements>
```

## Element classificationSchema

Namespace	<a href="https://DILCIS.eu/XML/ERMS">https://DILCIS.eu/XML/ERMS</a>	
Annotations	Element for describing the classification schema used in the XML-document	
Diagram	<pre> classDiagram     class classificationSchema     class textualDescriptionOfClassificationSchema {         &lt;&lt;Element for describing the classification schema used in the XML-document&gt;&gt;     }     class p {         &lt;&lt;A textual description of the classifications schema made in a customised (own) choice of element p&gt;&gt;     }     class additionalInformation {         &lt;&lt;Additional information for the classification schema&gt;&gt;     }      classificationSchema "0..1" --&gt; textualDescriptionOfClassificationSchema     textualDescriptionOfClassificationSchema "1..&gt;" --&gt; p     textualDescriptionOfClassificationSchema "0..1" --&gt; additionalInformation   </pre>	
Properties	content: complex	
Used by	Complex Type	controlType
Model	textualDescriptionOfClassificationSchema{0,1} , additionalInformation{0,1}	
Children	additionalInformation, textualDescriptionOfClassificationSchema	
Instance	<pre> &lt;classificationSchema xmlns="https://DILCIS.eu/XML/ERMS"&gt;   &lt;textualDescriptionOfClassificationSchema&gt;{0,1}&lt;/textualDescriptionOfClassificationSchema&gt;   &lt;additionalInformation&gt;{0,1}&lt;/additionalInformation&gt; &lt;/classificationSchema&gt;   </pre>	
Source	<pre> &lt;xs:element name="classificationSchema"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Element for describing the classification schema used in the XML-document&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt;   &lt;xs:complexType&gt;     &lt;xs:sequence&gt;       &lt;xs:element name="textualDescriptionOfClassificationSchema" minOccurs="0"&gt;         &lt;xs:annotation&gt;           &lt;xs:documentation xml:lang="en"&gt;A textual description of the classifications schema made in a customised (own) choice of element p&lt;/xs:documentation&gt;         &lt;/xs:annotation&gt;         &lt;xs:complexType&gt;           &lt;xs:sequence&gt;             &lt;xs:element name="p" type="xs:string" maxOccurs="unbounded"&gt;               &lt;xs:annotation&gt;                 &lt;xs:documentation xml:lang="en"&gt;Paragraphs in the form of p-elements with text&lt;/xs:documentation&gt;               &lt;/xs:annotation&gt;             &lt;/xs:element&gt;           &lt;/xs:sequence&gt;         &lt;/xs:complexType&gt;       &lt;/xs:element&gt;       &lt;xs:element ref="additionalInformation" minOccurs="0"&gt;         &lt;xs:annotation&gt;           &lt;xs:documentation xml:lang="en"&gt;Additional information for the classification schema&lt;/xs:documentation&gt;         &lt;/xs:annotation&gt;       &lt;/xs:element&gt;     &lt;/xs:sequence&gt;   &lt;/xs:complexType&gt; &lt;/xs:element&gt;   </pre>	

## Element classificationSchema / textualDescriptionOfClassificationSchema

Namespace	<a href="https://DILCIS.eu/XML/ERMS">https://DILCIS.eu/XML/ERMS</a>	
Annotations	A textual description of the classifications schema made in a customised (own) choice of element p	
Diagram	<pre> classDiagram     class textualDescriptionOfClassificationSchema {         &lt;&lt;A textual description of the classifications schema made in a customised (own) choice of element p&gt;&gt;     }     class p {         &lt;&lt;Paragraphs in the form of p-elements with text&gt;&gt;     }      textualDescriptionOfClassificationSchema "1..&gt;" --&gt; p   </pre>

**Element maintenanceType / maintenanceHistory / maintenanceEvent / agent**

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	The agent connected with the event
Diagram	<p>The diagram illustrates the structure of the <code>agentComplexType</code> element. It starts with a class named <code>agent</code> which has a type of <code>agentComplexType</code>. This type is defined by a complex type with several attributes and elements. The attributes are <code>@agentType</code> (Type: <code>Restriction of xs:string</code>) and <code>@otherAgentType</code> (Type: <code>xs:string</code>). The element <code>name</code> (Type: <code>xs:string</code>) is described as the name of a person or organization. The element <code>agentExtendingInformation</code> is noted as being extendable via XML schema. The element <code>organisation</code> (Type: <code>xs:string</code>) represents the name of an organization. The element <code>unitName</code> (Type: <code>xs:string</code>) represents the unit name. The element <code>idNumber</code> (Type: <code>Extension of xs:string</code>) represents an ID for a person or organization. The element <code>role</code> (Type: <code>xs:string</code>) represents the role of the agent. The element <code>addressContactInformation</code> is described as address and contact information. The element <code>protectedIdentity</code> (Type: <code>xs:boolean</code>) indicates if the person has protected identity. A general note at the bottom states: "Definition of one agent and its elements and attributes".</p>
Type	agentComplexType
Properties	content: complex
Model	name , agentExtendingInformation{0,1} , organisation{0,1} , unitName{0,1} , idNumber{0,1} , role{0,1} , addressContactInformation{0,1} , protectedIdentity{0,1}
Children	addressContactInformation, agentExtendingInformation, idNumber, name, organisation, protectedIdentity, role, unitName
Instance	<pre>&lt;agent agentType="" otherAgentType="" xmlns="https://DILCIS.eu/XML/ERMS"&gt;   &lt;name&gt;{1,1}&lt;/name&gt;   &lt;agentExtendingInformation&gt;{0,1}&lt;/agentExtendingInformation&gt;   &lt;organisation&gt;{0,1}&lt;/organisation&gt;   &lt;unitName&gt;{0,1}&lt;/unitName&gt;   &lt;idNumber idNumberType=""&gt;{0,1}&lt;/idNumber&gt;   &lt;role&gt;{0,1}&lt;/role&gt;   &lt;addressContactInformation&gt;{0,1}&lt;/addressContactInformation&gt;   &lt;protectedIdentity&gt;{0,1}&lt;/protectedIdentity&gt; &lt;/agent&gt;</pre>

Attributes	QName	Type	Use	
	<b>agentType</b>	restriction of xs:string	required	
		Required typing of the agent. When set to the value other a customised (own) extending value can be given with the attribute OtherAgentType 2020-02-11 update in value list. "Authorizing person" -> "Authorising person"		
	<b>otherAgentType</b>	xs:string	optional	
		When attribute agentType has value "other", this attribute is used to give the Agent Type		
Source	<pre>&lt;xs:element name="agent" type="agentComplexType"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;The agent connected with the event&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>			

## Element name

Namespace	https://DILCIS.eu/XML/ERMS		
Annotations	Reusable name element		
Diagram	<p>The diagram illustrates the 'name' element as a reusable name element. It consists of a rounded rectangle labeled 'name' with a small circle and a minus sign (-) to its right, indicating it is a reusable element. An arrow points from this element to another rounded rectangle labeled 'xs:string' with a small circle and a plus sign (+) to its right, indicating it is a primitive type. A callout box labeled 'Reusable name element' points to the first element, and another callout box labeled 'Built-in primitive type. The string datatype represents character strings in XML.' points to the second element.</p>		
Type	xs:string		
Properties	content:	simple	
Used by	Complex Type	agentComplexType	
Source	<pre>&lt;xs:element name="name" type="xs:string"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Reusable name element&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>		

## Element agentExtendingInformation

Namespace	https://DILCIS.eu/XML/ERMS		
Annotations	A agent can be described using another standards. In those cases either a file containing the information as an appendix or extending XML information is added		
Diagram	<p>The diagram shows the 'agentExtendingInformation' element as a complex type extending 'agentComplexType'. It features a central node with a plus sign (+) and a minus sign (-) symbol, with arrows pointing to two child nodes: 'agentExtendingAppendix' and 'agentExtendingXMLInformation'. Each child node has a plus sign (+) symbol to its right. Callout boxes provide additional context: one for 'agentExtendingInformation' stating 'A agent can be described using another standards. In those cases either a file containing the information as an appendix or extending XML information is added...', and another for each child node stating 'Appendix which points to the agent information' and 'Inserted XML which describes the agent' respectively.</p>

## Element parentAggregationId

Namespace	https://DILCIS.eu/XML/ERMS	
Annotations	Parent aggregation for a child aggregation or record	
Diagram	<p>The diagram illustrates the type xs:string. It shows a rounded rectangle labeled "parentAggregationId" with a line pointing to another rounded rectangle labeled "xs:string". A callout box indicates that "Type" is "xs:string". Another callout box states: "Parent aggregation for a child aggregation or record" and "Built-in primitive type. The string datatype represents character strings in XML."</p>	
Type	xs:string	
Properties	content: simple	
Used by	Complex Types	aggregationType, recordType
Source	<pre>&lt;xs:element name="parentAggregationId" type="xs:string"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Parent aggregation for a child aggregation or record&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>	

## Element hierarchicalParentClassId

Namespace	https://DILCIS.eu/XML/ERMS	
Annotations	The parent class for a hierarchical class	
Diagram	<p>The diagram illustrates the type xs:string. It shows a rounded rectangle labeled "hierarchicalParentClassId" with a line pointing to another rounded rectangle labeled "xs:string". A callout box indicates that "Type" is "xs:string". Another callout box states: "The parent class for a hierarchical class" and "Built-in primitive type. The string datatype represents character strings in XML."</p>	
Type	xs:string	
Properties	content: simple	
Used by	Complex Type	aggregationType
Source	<pre>&lt;xs:element name="hierarchicalParentClassId" type="xs:string"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;The parent class for a hierarchical class&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>	

## Element maxLevelsOfAggregation

Namespace	https://DILCIS.eu/XML/ERMS	
Annotations	The maximum levels of aggregation allowed below a root aggregation	
Diagram	<p>The diagram illustrates the type xs:int. It shows a rounded rectangle labeled "maxLevelsOfAggregation" with a line pointing to another rounded rectangle labeled "xs:int". A callout box indicates that "Type" is "xs:int". Another callout box states: "The maximum levels of aggregation allowed below a root aggregation" and "Built-in derived type. The int datatype is derived from long by setting the value of maxInclusive to be 2147483647 and..."</p>	
Type	xs:int	
Properties	content: simple	
Used by	Complex Type	aggregationType
Source	<pre>&lt;xs:element name="maxLevelsOfAggregation" type="xs:int"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;The maximum levels of aggregation allowed below a root aggregation&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>	

## Element levelName

Namespace	https://DILCIS.eu/XML/ERMS	
-----------	----------------------------	--

Annotations	Generic element for describing name of level of record or aggregation
Diagram	<p>Diagram illustrating the schema element:</p> <pre> classDiagram     class levelName {         xs:string     }     xs:string &lt;--&gt; levelName     note over xs:string: Built-in primitive type. The string datatype represents character strings in XML.     note over levelName: Generic element for describing name of level of record or aggregation   </pre>
Type	xs:string
Properties	content: simple
Used by	Complex Types aggregationType, recordType
Source	<pre> &lt;xss:element name="levelName" type="xs:string"&gt;   &lt;xss:annotation&gt;     &lt;xss:documentation xml:lang="en"&gt;Generic element for describing name of level of record or aggregation&lt;/xss:documentation&gt;   &lt;/xss:annotation&gt; &lt;/xss:element&gt;   </pre>

## Element keywords

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	List of Keywords to identify the aggregation or record
Diagram	<p>Diagram illustrating the schema element:</p> <pre> classDiagram     class keywords {         * keyword     }     keyword &lt;--&gt; keywords     note over keywords: List of Keywords to identify the aggregation or record     note over keyword: One keyword   </pre>
Properties	content: complex

### Element **disposalType / lastReviewedDisposalComment**

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	Comment made by the user that last reviewed the record explaining the disposal decision made by that reviewer

Diagram	A UML class diagram showing a class named 'lastReviewedDisposalComment' with a 'Type' attribute set to 'xs:string'. A line connects this to another 'xs:string' type. A callout box under 'lastReviewedDisposalComment' says 'Comment made by the user that last reviewed the record explaining the disposal decision made by that reviewer'. A callout box next to 'xs:string' says 'Built-in primitive type. The string datatype represents character strings in XML.'
Type	xs:string
Properties	<p>content: simple</p> <p>minOccurs: 0</p>
Source	<pre>&lt;xs:element name="lastReviewedDisposalComment" type="xs:string" minOccurs="0"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Comment made by the user that last reviewed the record explaining the disposal decision made by that reviewer&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

### Element disposalType / disposingPerson

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	Disposing person
Diagram	A UML class diagram showing a class named 'disposingPerson' with a 'Type' attribute set to 'xs:string'. A line connects this to another 'xs:string' type. A callout box under 'disposingPerson' says 'Disposing person'. A callout box next to 'xs:string' says 'Built-in primitive type. The string datatype represents character strings in XML.'
Type	xs:string
Properties	<p>content: simple</p> <p>minOccurs: 0</p> <p>maxOccurs: unbounded</p>
Source	<pre>&lt;xs:element name="disposingPerson" type="xs:string" minOccurs="0" maxOccurs="unbounded"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Disposing person&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

### Element disposalType / supervisingPerson

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	Person supervising the disposal
Diagram	A UML class diagram showing a class named 'supervisingPerson' with a 'Type' attribute set to 'xs:string'. A line connects this to another 'xs:string' type. A callout box under 'supervisingPerson' says 'Person supervising the disposal'. A callout box next to 'xs:string' says 'Built-in primitive type. The string datatype represents character strings in XML.'
Type	xs:string
Properties	<p>content: simple</p> <p>minOccurs: 0</p> <p>maxOccurs: unbounded</p>
Source	<pre>&lt;xs:element name="supervisingPerson" type="xs:string" minOccurs="0" maxOccurs="unbounded"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Person supervising the disposal&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:element&gt;</pre>

### Element disposalType / dates

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	All dates associated with the disposal
Diagram	A UML class diagram showing a class named 'dates' with a multiplicity of 1..oo connected via a line to a class named 'disposalDate' with a multiplicity of +. Both classes have a 'Type' attribute set to 'disposalDateTypes'. A callout box under 'dates' says 'All dates associated with the disposal'.

Properties	content: complex

## Element agent

Namespace	https://DILCIS.eu/XML/ERMS
Annotations	Agents in any form handling the aggregation or record
Diagram	<p>The diagram illustrates the schema definition for the 'agent' element. It shows the 'agent' element as a class with a multiplicity of 0..1, indicating it is an optional component. The element is defined by the 'agentComplexType' class. This complex type contains several attributes:</p> <ul style="list-style-type: none"> <li><b>agentType</b>: Type is 'Restriction of xs:string'. A note states: "Required typing of the agent. When set to the value other a customised (own) extending value can be given with the..."</li> <li><b>otherAgentType</b>: Type is 'xs:string'. A note states: "When attribute agentType has value "other", this attribute is used to give the Agent Type".</li> <li><b>name</b>: Type is 'xs:string'. A note states: "Name of person or organisation".</li> <li><b>agentExtendingInformation</b>: A reference to another class.</li> <li><b>organisation</b>: Type is 'xs:string'. A note states: "Name of organisation".</li> <li><b>unitName</b>: Type is 'xs:string'. A note states: "Unit name".</li> <li><b>idNumber</b>: Type is 'Extension of xs:string'. A note states: "ID-for person or organisation".</li> <li><b>role</b>: Type is 'xs:string'. A note states: "Role of the agent".</li> <li><b>addressContactInformation</b>: A reference to another class.</li> <li><b>protectedIdentity</b>: Type is 'xs:boolean'. A note states: "Person has protected identity".</li> </ul> <p>A large note at the bottom of the diagram states: "Definition of one agent and its elements and attributes".</p>

## Complex Type addressLineType

Namespace	https://DILCIS.eu/XML/ERMS												
Annotations	Definition of all different kinds of address line types that can be used. Can have value other with their own created extending value.												
Diagram	<p>The diagram illustrates the UML representation of the <code>addressLineType</code> complex type. It shows a class box labeled <code>addressLineType</code> with a note below it: "Definition of all different kinds of address line types that can be used. Can have value other with their own created...". A line connects this class to a generalization box labeled <code>xs:string</code>, which contains a note: "Built-in primitive type. The string datatype represents character strings in XML.". Below the generalization box is a box for attributes, containing two entries: <code>@ addressType</code> (Type: Restriction of <code>xs:string</code>) and <code>@ otherAddressLineType</code> (Type: <code>xs:string</code>). A note below these attributes states: "When addressType is set to "other" this attribute is used to state the type of address line".</p>

**Attribute directionType / @otherDirectionDefinition**

Namespace	No namespace	
Annotations	When the attribute directionDefiniton is set to "other" this attribute is used to state the type of direction	
Type	xs:string	
Properties	use: optional	
Used by	Complex Type directionType	
Source	<pre>&lt;xs:attribute name="otherDirectionDefinition" type="xs:string" use="optional"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;When the attribute directionDefiniton is set to "other" this attribute is used to state the type of direction&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:attribute&gt;</pre>	

**Attribute recordType / @systemIdentifier**

Namespace	No namespace	
Annotations	An identifier for the record with the type UUID created at the latest at the export of the information	
Type	xs:string	

Properties	use:	required
Used by	Complex Type	recordType
Source	<pre>&lt;xs:attribute name="systemIdentifier" type="xs:string" use="required"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;An identifier for the record with the type UUID created at the latest at the export of the information&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:attribute&gt;</pre>	

**Attribute recordType / @recordType**

Namespace	No namespace	
Annotations	Type of the record	
Type	xs:string	
Properties	use:	optional
Used by	Complex Type	recordType
Source	<pre>&lt;xs:attribute name="recordType" type="xs:string" use="optional"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Type of the record&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:attribute&gt;</pre>	

**Attribute recordType / @recordPhysicalOrDigital**

Namespace	No namespace									
Annotations	State whether the record is physical, digital, both or if the statement dont apply.  2020-02-11 update of value list. "Dont apply" -> "Does not apply"									
Type	restriction of xs:string									
Properties	use:	optional								
Facets	<table border="1"> <tr> <td>enumeration</td> <td>physical</td> </tr> <tr> <td>enumeration</td> <td>digital</td> </tr> <tr> <td>enumeration</td> <td>physcical_and_digital</td> </tr> <tr> <td>enumeration</td> <td>does_not_apply</td> </tr> </table>		enumeration	physical	enumeration	digital	enumeration	physcical_and_digital	enumeration	does_not_apply
enumeration	physical									
enumeration	digital									
enumeration	physcical_and_digital									
enumeration	does_not_apply									
Used by	Complex Type	recordType								
Source	<pre>&lt;xs:attribute name="recordPhysicalOrDigital" use="optional"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;State whether the record is physical, digital, both or if the statement dont apply.&lt;/xs:documentation&gt;     &lt;xs:documentation xml:lang="en"&gt;2020-02-11 update of value list. "Dont apply" -&gt; "Does not apply"&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt;   &lt;xs:simpleType&gt;     &lt;xs:restriction base="xs:string"&gt;       &lt;xs:enumeration value="physical"/&gt;       &lt;xs:enumeration value="digital"/&gt;       &lt;xs:enumeration value="physcical_and_digital"/&gt;       &lt;xs:enumeration value="does_not_apply"/&gt;     &lt;/xs:restriction&gt;   &lt;/xs:simpleType&gt; &lt;/xs:attribute&gt;</pre>									

**Attribute aggregationType / @systemIdentifier**

Namespace	No namespace	
Annotations	An identifier for the aggregation with the type UUID created at the latest at the export of the information	
Type	xs:string	
Properties	use:	required
Used by	Complex Type	aggregationType
Source	<pre>&lt;xs:attribute name="systemIdentifier" type="xs:string" use="required"&gt;   &lt;xs:annotation&gt;</pre>	

```

<xs:documentation xml:lang="en">An identifier for the aggregation with the type UUID created at
the latest at the export of the information</xs:documentation>
</xs:annotation>
</xs:attribute>

```

### Attribute aggregationType / @aggregationType

Namespace	No namespace	
Annotations	Describes the aggregation type. Value "own_aggregation_definition" demands use of otherAggregationType attribute	
Type	restriction of xs:string	
Properties	use: required	
Facets	enumeration	caseFile
	enumeration	class
	enumeration	component
	enumeration	file
	enumeration	subfile
	enumeration	volume
	enumeration	own_aggregation_definition
Used by	Complex Type	aggregationType
Source	<pre> &lt;xs:attribute name="aggregationType" use="required"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;Describes the aggregation type. Value     "own_aggregation_definition" demands use of otherAggregationType attribute&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt;   &lt;xs:simpleType&gt;     &lt;xs:restriction base="xs:string"&gt;       &lt;xs:enumeration value="caseFile"/&gt;       &lt;xs:enumeration value="class"/&gt;       &lt;xs:enumeration value="component"/&gt;       &lt;xs:enumeration value="file"/&gt;       &lt;xs:enumeration value="subfile"/&gt;       &lt;xs:enumeration value="volume"/&gt;       &lt;xs:enumeration value="own_aggregation_definition"/&gt;     &lt;/xs:restriction&gt;   &lt;/xs:simpleType&gt; &lt;/xs:attribute&gt; </pre>	

### Attribute aggregationType / @otherAggregationType

Namespace	No namespace	
Annotations	When value "own_aggregation_definition" is used the attribute otherAggregationType is used to describe the aggregation type	
Type	xs:string	
Properties	use: optional	
Used by	Complex Type	aggregationType
Source	<pre> &lt;xs:attribute name="otherAggregationType" type="xs:string" use="optional"&gt;   &lt;xs:annotation&gt;     &lt;xs:documentation xml:lang="en"&gt;When value "own_aggregation_definition" is used the attribute     otherAggregationType is used to describe the aggregation type&lt;/xs:documentation&gt;   &lt;/xs:annotation&gt; &lt;/xs:attribute&gt; </pre>
